DETAILED ACTION

1. New corrected drawings are required in this application because figure 3 has text that is unreadable, and figures 1-2, and 4 list statements that should be represented in a flowchart. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

2. The disclosure is objected to because of the following informalities: There are multiple instances of grammatical and spelling errors.

Appropriate correction is required.

3. Claims 1-58 are objected to because of the following informalities: The claims have multiple instances of grammatical and spelling errors. Appropriate correction is required.

4. Claims 1-58 are objected to because of the following informalities: Some of the claims appear to have been renumbered by the applicant, however, the renumbering of the claims is not fully legible. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 56-58 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

6. Claim 56 recites the limitation "those selected part numbers" in lines 9-10. There is insufficient antecedent basis for this limitation in the claim.

7. Claims 57-58 are rejected by virtue of their dependence upon a rejected independent claim.

8. The following is a statement of reasons for the indication of allowable subject matter: As for claims 1-58, the prior art of record fails to disclose either singularly or in combination a method, system computer program products for generating a drawing of a network comprising at least the steps of matching each connector with a vendor part number determined by matching anticipated current in said network connector with current capacity of an available connector; and instruction for selecting from said table of available conductors, those available conductors having specifications matching specifications of said network conductors and adding type numbers of selected available conductors to said table of network conductors.
